<sup>®</sup>Sandoz® Apremilast (apremilast) is indicated for the treatment:

- of adult patients with moderate to severe plaque psoriasis who are candidates for phototherapy or systemic therapy.
- alone or in combination with methotrexate, of active psoriatic arthritis in adult patients who have had an inadequate response, intolerance, or contraindication to a prior disease-modifying anti-rheumatic drug (DMARD).
- of adult patients with oral ulcers associated with Behçet's disease who are candidates for systemic therapy.
